

GRAVITY TANK

INSTALLATION AND OPERATING INSTRUCTIONS

BA-MS-700 & BA-MS-702

Installation Instructions

1. Before drilling holes for your mounting hardware please note that the bottom of the tank **MUST be a MINIMUM of six feet above the TOP of your batteries** in order for your Millennium SPW™ System to work properly.
2. The Bracket/Tank should be mounted near a hose bibb that can be dedicated to the water supply. The wall anchors require a ¼” hole diameter.
3. Place tank on bracket and rotate black elbow 90° so it is facing down. (Nut may need to be re-tightened to prevent leaking.)
4. Connect hose with quick coupler to side with black elbow.
5. (This Step for P/N BA-MS-700 only) Connect hose with Swivel Garden Hose Threads to side with gray elbow. The end with the filter screen should be connected to the facility hose bibb.

Operating Instructions

1. Refill batteries after they have been charged. One watering per week is usually enough.
2. Firmly mate the quick couplers. When this connection is made the red balls in the Flow Indicator will start rotating indicating water is flowing into the battery cells.
3. After the Flow Indicator balls stop rotating, immediately disconnect by pushing the CPC button in and pulling the male quick coupler out.
4. Repeat on the next battery.
